

California AB1953 & Vermont Act 193

- Effective January 1, 2010, the new laws revise the meaning of “lead free” from 8% lead for pipes or pipe fittings, and 4% lead for plumbing fittings and fixtures to ***not more than a weighted average of 0.25% lead content when used with respect to the wetted surfaces*** of pipes and pipe fittings, plumbing fittings and fixtures, which is a different methodology for measuring lead content compared to the existing laws.

What is the intent of AB1953 & Act 193?

- Requires “lead free” products in plumbing systems providing water for drinking and cooking
- Requires products entered into commerce in California & Vermont to be “lead free”
- Exempts products used for purposes other than conveying water for drinking and cooking (e.g., products used for irrigation or manufacturing)

How will it affect you?

- You must comply - it's the law in CA & VT
- Prohibits the sale and installation of any pipe, pipe fitting or plumbing fitting that is not “lead free” on January 1, 2010
- Non-compliant inventory is not grandfathered for continued use in the states of California and Vermont
- Products Impacted:
 - pipes
 - fittings
 - fixtures including faucets
- Excludes pipe *not* used in providing water for drinking or cooking

What happens January 1st, 2010?

Pipes, fittings and fixtures that are:

- Purchased from manufacturers
- Stocked on shelves
- Sold to customers
- Offered as options to homebuyers
- And installed

...must be lead free per AB 1953 & Act 193

How will the legislation be enforced?

- Building permits
- Inspections
- The Department of Toxic Substances Control will be sampling some 75 products purchased from wholesale or retail each year and evaluating them against the legal requirements.
- The laws requires that products be certified by an ANSI accredited 3rd Party certifier.
